

# Services provided by the internet

PowerPoint Presentation by Krishnaraj

Class 10A

# What is internet

- The **Internet** is an increasingly important part of everyday life for people around the world. The Internet has revolutionized the computer and communications world like nothing before.
- The Internet is a **global network** of billions of computers and other electronic devices. With the Internet, it's possible to access almost any information, communicate with anyone else in the world, and do much more.
- You can do all of this by connecting a computer to the Internet, which is also called **going online**. When someone says a computer is online, it's just another way of saying it's connected to the Internet.

# What is the world wide web

- The **World Wide Web**—usually called the **Web** for short—is a collection of different **websites** you can access through the Internet. A **website** is made up of related text, images, and other resources. Websites can resemble other forms of media—like newspaper articles or television programs—or they can be interactive in a way that's unique to computers.
- The purpose of a website can be almost anything: a news platform, an advertisement, an online library, a forum for sharing images, or an educational site

# What are the services provided by the internet?

The uses of the internet can be broadly classified into 5

1. Research and homework
2. Communication
3. Shopping
4. Leisure and Entertainment
5. Exploring the world

# communication

The Internet is no longer just a place of content. It is the latest technological breakthrough in communication following the telegraph and the telephone. Internet users are able to communicate with each other from all around the world instantaneously. With the necessary tools, users can share photos, send virtual birthday and Christmas cards and develop better relationships with family and friends.

The internet has opened up lots of new ways for us to communicate.

At the touch of a button we have the ability to instantly get in touch with almost anyone, anywhere on the planet.

There are many different types of communication technology. They all have different strengths. It is important to think about which type of communication is best for each occasion.

# EMAIL

- A shortened form of "electronic mail," an email works much like traditional mail in that messages are still sent by one person, received and sometimes saved by another, but the process is instantaneous. Users are given a unique email address from which messages are passed back and forth. Additionally, one message can be sent to several recipients simultaneously.
- . This is because you'll need an email address to do just about anything online, from online banking to creating a Facebook account.

**Thank you and appointment confirmation** — ↗ ✕

Henri Rousseau

Thank you and appointment confirmation

Hi Henri,

Thanks again for coming to the grand opening. It was very nice meeting you. I'd like to confirm the appointment you made to come on Saturday at 12:00 for your sibling portrait. I know your parents in Canada are going to love it!

We'll see you on Saturday,  
Elena

# Social networking

- **Social networking websites** are another way to **connect and share** with your family and friends online. Rather than sharing with just a few people over email, social networks make it easier to **connect** and **share** with many people at the same time.
- **Facebook** is the world's largest social networking site, with **more than 1 billion users** worldwide.

# Chat and instant messaging

**Chat** and **instant messaging (IM)** are short messages sent and read **in real time**, allowing you to converse more quickly and easily than email. These are generally used when both (or all) people are online, so your message can be read immediately. By comparison, **emails** won't be seen until recipients check their inboxes.

# entertainment

## Online media

- There are many sites that allow you to **watch videos** and **listen to music**. For example, you can watch millions of videos on [YouTube](#) or listen to Internet radio on [Pandora](#). Other services, like [Netflix](#) and [Hulu](#), allow you to watch movies and TV shows. And if have a **set-top streaming box**, you can even watch them directly on your television instead of a computer screen.

# Online booking and shopping

- Online booking has made things really easy. Be it a movie ticket or flight ticket, you can book just about anything using Internet. The process is very easy, convenient and super fast.
- The use of internet is not limited merely to booking tickets. With help of net, you can do a full-fledged online shopping. On popular e-stores like EBay, Amazon etc., one can find almost anything that he needs to buy. These e-stores are reliable and you can find quality products at most competitive rates on them; and all this can be done without even stepping out of your home!

# E banking and data sharing

- Banking was never so easy and convenient before! Right from opening an account to operating it, E-Banking has really been a big boon for everyone. Not only can one view his account activities but he can also execute online transactions from the comfort of the home.
- Data sharing was never so easy and quick before! It doesn't matter, if you have to send a file or song, a picture or a eBook,; with help of internet, you can send just about anything at anywhere and that too, in no time!

# education

- The growth of the Internet in the world provides many opportunities to many people around the world in many different ways. When students are considered, the use of the Internet is mainly for social and entertainment purposes.
- However, it is very obvious that the Internet provides not only social connection and entertainment, but also academic and scientific information as well.
- Additionally, the Internet can be used as a tool to learn the latest news all around the world as well as getting any kind of information that serves different purposes such as learning more information about a hobby or health.

- Therefore, it can be said that the Internet is the source of spreading information quickly to a large audience and of going beyond the limitation of time and space.
- I don't want to use these words here but it is true that assignments are like the burden on us. I remember my time when I had to make assignments by reading many books. But a time changed when I came in touch of the internet. Now I could surf any topic and wrote about it easily.
- I completed all my assignments just with the help of internet in short period of time. Internet also helped me in making notes ([Benefits of making notes for students](#)). That's how I made great use of internet in education by making my assignments.

# Conclusion and summary

- Hence we can say that internet can be used in many different ways as per ones use and requirement
- From education to communicating with people internet has changed our lives completely
- Internet has become a vital part of our day to day life
- Without the existence of modern form and ways to access the internet one enjoys the new horizons of the unending possibilities of the internet

Thank you !  
Happy surfing!
